Exercise: Words Analysis

Create a custom dataset representing an imaginative story. Each chapter of the story can be represented as a dictionary or a tuple with attributes like "chapter_number" and "content."

```
story = [
    {"chapter_number": 1, "content": "Once upon a time..."},
     # Add more chapters here
]

# Implement your analysis
```

Perform your analysis and derive at least 10 interesting insights of all the chapters by utilizing RDD operations as covered in the tutorial notebooks.
